

Assess and Patch Microsoft Windows® and Mac OS® Systems, Wherever They Are

Effective patch management is an ever-present challenge, with new vulnerabilities appearing almost daily. Many organizations struggle to keep systems up-to-date, especially in environments that include multiple operating systems and critical third-party applications. Shavlik® Empower keeps your systems current with the latest software updates for Microsoft Windows, Mac OS, and every popular third-party application in your organization.

CONSOLIDATED PATCH MANAGEMENT FOR WINDOWS AND MAC OS SYSTEMS

Apple® Mac OS systems are growing in popularity at enterprises of all sizes and types. Those systems require efficient, effective patching, just as their Windows counterparts do. In 2015, Apple software accounted for more vulnerabilities than that from any other vendor. And 86 percent of reported vulnerabilities stem from third-party applications, not operating systems.* Shavlik Empower enables consistent, consolidated patching of Microsoft Windows, Mac OS, and hundreds of popular third-party applications, including Oracle® Java, Adobe® Flash® and Reader, and more.

PATCH ALL OF YOUR WINDOWS AND MAC SYSTEMS, WHEREVER THEY ARE

Shavlik Empower is a cloud-based solution. This means that you can use Empower to manage patching of Windows and Mac OS systems, wherever they may be—connected directly to your network or in a user's home or local coffee shop. Your mobile Windows and Mac OS system users are as protected as those within your firewall, with no virtual private network (VPN) connections required.

PATCH MANAGEMENT PLUS ASSET INTELLIGENCE

In addition to consolidated patch management for your Windows and Mac OS systems, Shavlik Empower also delivers detailed intelligence about those critical assets. This information helps to guide and validate your patching efforts, and to ensure that they are providing the protection your business needs.

* National Vulnerability Database

PATCH MANAGEMENT TAILORED TO FIT YOUR BUSINESS NEEDS

Shavlik Empower supports fully automated patching, controlled by policies that your organization defines. Patching decisions can be filtered based on multiple criteria, including vendor, product family or version, and update severity. The same workflows can be used for patching of Windows and Mac OS systems, with only minor filtering options for your Mac OS devices. Shavlik Empower also gives you full control over patch deployment scheduling and system reboot options, to maximize protection while minimizing disruption of users or business operations.

IMPROVE PATCHING, DECREASE RISK, INCREASE SECURITY AND COMPLIANCE

Shavlik Empower discovers and inventories your Windows and Mac OS systems quickly and comprehensively, so you know what patches are deployed, what patches are needed, and what systems need them. This detailed information, combined with rapid remediation capabilities, make your patching efforts more efficient and effective, and your network more secure and compliant with business and regulatory requirements.

GET A COMPLETE PICTURE OF WINDOWS AND MAC PATCH STATUS, ON DEMAND

Shavlik Empower includes numerous pre-configured and user-configurable dashboards and information display grids, designed to show clearly and quickly the patch status of all of your Windows and Mac OS systems. Zero in on those systems at greatest risk, and prioritize your patch deployments to deliver maximum protection to your users and business-critical IT resources.

Shavlik® Empower

ANY PATCH, ANYWHERE

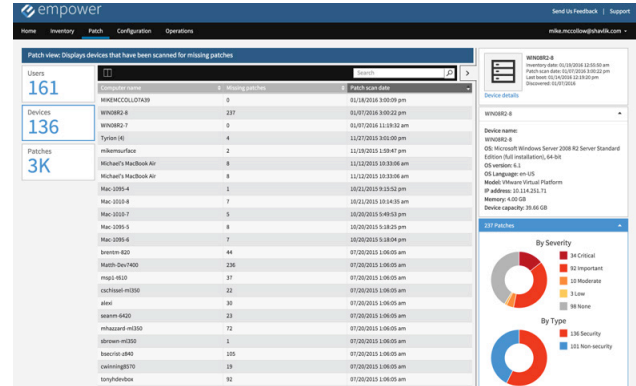

Keep an Eye on Users and Devices

Shavlik Empower tells you what you need to know about the status of your Windows and Mac OS systems, quickly and clearly.

FEATURES

- ▶ Comprehensive patch management
 - Manage Microsoft Windows, Mac OS, and third-party updates from a single console
 - Automated deployment of OS and third-party patches; for a current list of third-party application updates supported by Shavlik Protect and Shavlik Empower, please visit: <http://www.shavlik.com/support/protect/supported-products/>
 - Rapid, agentless Windows system discovery and inventory
 - Cloud-based agent for patch management of off-network systems
 - Flexible, precise patch deployment and system reboot options
- ▶ Ease of use
 - Intuitive, consolidated interface
 - Comprehensive dashboards deliver clear, actionable information
 - Can be deployed independently or in concert with Shavlik Protect

Manage Microsoft Windows, Mac OS, and third-party updates from a single console.
