

StealthAUDIT Sensitive Data Discovery

STEALTHbits' Sensitive Data Discovery solution locates sensitive information within files of over 380 different file types using a combination of built-in keywords, customizable keywords, and regular expressions. The ability to combine both keywords and regular expressions is instrumental to increasing the efficacy of our scans. For example, identifying a Social Security Number using either keywords or regular expressions alone wouldn't work. However, when we combine high quality regex with keywords such as "SSN" or "Social Security Number", we can ensure that the 9-digit number found is, actually, a social security number and not a false positive.

Supported Platforms

Windows file systems, NetApp, EMC Isilon and Celerra NAS, Samba, SharePoint, SharePoint Online.

Supported File Types

There are two categories of file types supported by StealthAUDIT:

1. **Scan-able Types** – Files from which file type, text, and metadata can be extracted
2. **Metadata Only Types** – Files from which only file type and metadata can be extracted
